

1

Complete counterfactual candidate set

2A

Predictive Plasticity

Adapt the decision-facing predictive representation.

2B

Relational Alignment

Learn decision structure over the complete candidate set.

2C

Multi-geometry alignment (MG)

Scale-free ordinal structure

Convert each geometry's evidence to within-set ordinal coordinates

Permutation-equivariant set interaction with bounded score correction

Per-candidate descriptor

3

Calibrated Composition

Admit the plastic proposal only when its advantage is reliable.

4

Decision-aligned candidate ordering
