

Context (PushT)

Goal state

Two nearby candidate actions

Predicted future (plausible)

Candidate A (fail)

Predicted future (plausible)

Candidate B (success)

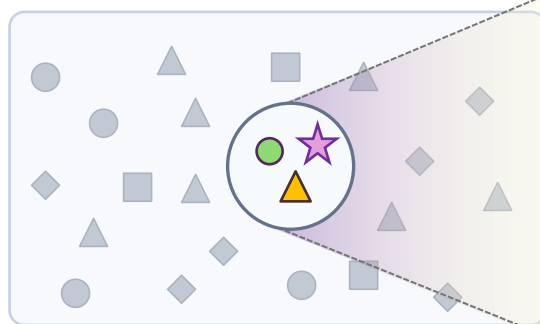

Observed Mismatch

D-JEPA learns decision relations and writes them back into the latent space.

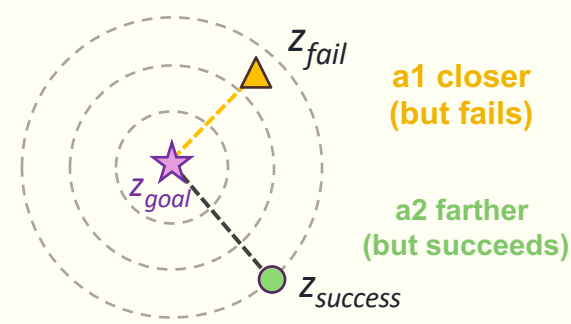

Closer in prediction, worse in action.

$$d_{pred}(z_{fail}, z_{goal}) < d_{pred}(z_{success}, z_{goal})$$
